

# MILSIM/Airsoft Outdoor Insurance Requirements

The following are industry standards regardless of agency or carrier. Every player, team, field owner and event producer is responsible for meeting and enforcing these standards. Any incident affects our whole community.

**EYE PROTECTION:** full seal and ANSI rated are required. Mesh eye protection is authorized with glasses underneath. The key element is to protect your eyes from all directions and the potential of shattered BBs.

**EAR PROTECTION:** The key element is to protect the soft tissue of the ear and the ear canal. There are no prescriptive measures outlined to meet this requirement. The following are examples of solutions: radio headset, helmet, head wrap, schemag or wrap around mesh mask.

**FACE PROTECTION:** The key element is to protect the soft tissue of the face, mouth and nose, teeth and nasal cavity. There are no prescriptive measures outlined to meet this requirement. The following are examples of solutions: head wrap, ski mask, schemag, mesh mask, plastic mask or full integrated paintball style helmet.

**BARREL COVER:** The key element is to prevent the accidental discharge of a BB in goggle free areas – transportation, assembly areas, camping areas, parking lots, stores, movement to and from the engagement area, command posts, etc. This is an additional layer of risk management which compliments standard weapon safety procedures – finger off the trigger until required to shoot, weapon on safe until required to shoot, and weapon cleared with magazine out in goggle free areas. No homemade devices.

**FPS LIMITS:** The following outdoor FPS requirements are with either .20 or .25 BBs at the discretion of the field owner or event producer.

- Rifle platforms = 400 FPS
- Support weapon platforms = 400 FPS
- Sniper platforms = 500 FPS with a minimum engagement distance of 100 feet
- Equivalent joule ratings may be used
